Hiring Team
Databricks
San Francisco, California

Dear Databricks Hiring Team,

I am a Ph.D. student in Computer Science at the University of Central Florida, expecting to graduate in Spring 2029, and I am applying for the Ph.D. GenAI Research Scientist Intern position. My research focuses on social reasoning and Theory of Mind, including how AI systems represent mental states and use social context. I am interested in exploring these questions across language and multimodal settings, and I am drawn to this role's focus on evaluating and adapting generative AI systems.

As the lead author of OmniToM, accepted to the NeurIPS 2026 Evaluations & Datasets Track, I led a research project on social reasoning in language models. The work involved developing a benchmark, coordinating human review, and evaluating a range of models. It strengthened my ability to design research studies, work with human-labeled data, compare system behavior, and communicate findings.

My earlier projects have given me complementary experience with data and implementation. In BIAS-101, I curated and analyzed video data to study demographic representation in recognition systems. In DETECT, I led a student team in building and evaluating a real-time system. These projects strengthened my ability to work across the research process, from organizing data and coordinating implementation to evaluating results. I would bring that experience to Databricks' work on adapting and evaluating AI systems.

I would welcome the opportunity to bring this mix of research, data, and implementation experience to Databricks and contribute to its work on generative AI systems.

Sincerely,

Adam Bawatneh
