October 15, 2026

Dear Amazon Research Science Hiring Committee,

I am a Computer Science Ph.D. student at the University of Central Florida applying for a research science internship. My primary research interest is social reasoning and Theory of Mind. My current research studies these topics with large language models, and I am open to related questions across methods and modalities.

I am the sole first author of OmniToM, accepted to the NeurIPS 2026 Evaluations and Datasets Track. OmniToM studies whether language models can recover the beliefs held by different people in a story. I helped build its human-labeled benchmark, coordinated annotation quality checks, and evaluated API and open-weight models across Azure OpenAI, Anthropic, Vertex AI, and university and NSF ACCESS high-performance computing resources. This work has taught me to connect research questions, dataset construction, implementation, and analysis.

I also mentored an REU student on a project for detecting specialized language. We combined translation instability, masked-language-model likelihood, surface features, and model agreement, then tested how well the approach transferred across domains and languages. As a Graduate Research Assistant, I contribute to research proposal development, including IARPA-focused proposals. I have also reviewed papers for NeurIPS, AAAI, and ACL. These experiences have strengthened my ability to evaluate research carefully and communicate its limits.

I would be glad to bring my research interest in social reasoning and Theory of Mind, along with my experience in benchmark development, language-model research, and evaluation, to an Amazon research team. Thank you for your consideration.

Sincerely,

Adam Bawatneh
